

Table of Contents

Introduction p. 9

I.	Strange from the very beginning	p. 11
II.	Existing results	p. 14
III.	Our approach	p. 14
IV.	Organization of the book	p. 15

Part I: Basic Facts p. 17

I.	Preliminary tools	p. 18
II.	Introducing the energy	p. 20
A.	Basic facts	p. 20
B.	A first change of variables	p. 21
C.	Specific situations	p. 21
1.	Horizontal lines	p. 21
2.	Diagonals	p. 22
D.	Second change of variables	p. 22
III.	Extension of the Framework	p. 23
IV.	Introducing a barrier	p. 26
A.	General definition	p. 27
B.	The case of a horizontal line	p. 28
C.	Different positions of the barrier	p. 31
D.	Present and past times	p. 31
E.	The x axis as a special case	p. 33
V.	Gaussian interpretation	p. 35
A.	General case	p. 35
B.	Introducing a barrier	p. 40
VI.	Operator Theory approach	p. 43
A.	General settings	p. 43
C.	Introducing a barrier	p. 51
1.	General coordinates	p. 51
2.	The matrix of the operator, new coord.	p. 55

Part II: Identical Initial Fortunes p. 59

I.	Introduction	p. 61
II.	Notation	p. 61
III.	Case $\xi = 2$	p. 62
IV.	General case, $\xi > 2$	p. 63
A.	Notation	p. 63
B.	Basic equations	p. 63
C.	Decrease of the energy on each vertical	p. 63
D.	Decrease of the energy with time	p. 65
E.	Matrix representation	p. 66
F.	A proper matrix representation	p. 67

1.	A second change in coordinates	p. 67
2.	The propagation problem in the new coordinates	p. 67
3.	Properties of the matrix M	p. 71
4.	Precise results on eigenvalues and eigenv.	p. 74
5.	Norms of the eigenvectors	p. 78
6.	Decomposition on the basis of eigenvectors	p. 81
7.	Combinatorial expressions	p. 85
8.	Consequences	p. 91
9.	Domination principle	p. 96
V.	Counting the paths	p. 97

Part III: Different Initial Fortunes **p. 101**

I.	Introduction	p. 103
II.	Presentation	p. 103
1.	Description 1	p. 103
2.	Description 2	p. 104
3.	Comparison between both	p. 104
III.	Notation	p. 104
IV.	Matrix representation	p. 105
A.	A real symmetric matrix	p. 105
B.	Main properties	p. 106
C.	Norms of the eigenvectors	p. 111
V.	The energy at each step	p. 113
A.	Initial Fortune	p. 113
B.	Combinatorial approach	p. 115
VI.	Numerical examples	p. 119
A.	Various time steps	p. 119
B.	Advantage for each player	p. 123
C.	Probability the game continues	p. 127
D.	Numerical profiles	p. 128
E.	Large fortunes	p. 131
F.	Asymptotic profile	p. 132
VII.	Counting the paths	p. 133

Part IV: Variable Fortunes **p. 137**

I.	Introduction	p. 139
II.	Transition between two periods	p. 140
A.	Energy propagation	p. 140
B.	Changes in the eigenvalues	p. 144
III.	Upper estimates	p. 145
A.	Statement of the results	p. 145
1.	First stage of the transition	p. 146
2.	Further stages of the transition	p. 147
3.	Decomposition on a basis	p. 149
4.	Sign of coefficients	p. 152
5.	Decomposition of U_1	p. 153
6.	Explicit computations...	p. 154

B.	Transition from step n to step $n+1$	p. 156
1.	Decomposition on eigenvectors	p. 156
2.	Estimates of $w_{i,j}$	p. 157
3.	Sign of transfer coefficients	p. 158
C.	Introducing the attenuation	p. 159
D.	Organization of the proof	p. 160
E.	Energy carried by each W_j	p. 161
1.	Energy carried by W_1	p. 162
2.	Energy carried by W_j	p. 170
F.	Total energy carried by W_{n+1}	p. 176
G.	Estimates upon positive energy	p. 177
IV.	Lower estimate	p. 178

**Part V: Khinchin's Law of the Iterated Logarithm:
Quantitative versions, p. 185**

I.	Introduction	p. 187
II.	Khinchin's Law:	p. 187
III.	Comparison with our results	p. 199

References p. 201
